

## Seahawks Capture Super Bowl LX Title

**Details:** The Seattle Seahawks produced a devastating defensive display to beat the New England Patriots and claim their second Super Bowl victory.

Two of the NFL's strongest defences battled it out in Sunday's showpiece and the Seahawks emphatically came out on top to win 29-13 at Levi's Stadium.

It was a defensive performance for the ages and Briton Aden Durde played a pivotal role, becoming the first overseas coach to win the United States' biggest game.

Seattle's 46-year-old defensive co-ordinator has helped create the most feared defence in the NFL, which has become known as 'the Dark Side', and they showed why on American football's biggest stage in Santa Clara, California.

New England's second-year quarterback Drake Maye narrowly missed out on **this season's Most Valuable Player** (MVP) award but was stifled by the Seahawks, who claimed six sacks, forced three turnovers and scored a defensive touchdown.

After Seattle led 9-0 at half-time, Maye's first turnover resulted in the game's opening touchdown for tight end AJ Barner early in the fourth quarter.

Linebacker Uchenna Nwosu then returned an interception for a 45-yard touchdown, while Jason Meyers kicked a record five field goals as Seattle denied the Patriots a record seventh Super Bowl win.

"We were the better team; we're the best team. We loved each other, we believed in each other and now we're champions," Seahawks head coach Mike Macdonald told NBC.

"We went to the dark side tonight. We love our players - they made it happen. They made it come to life."

Most of the 70,823 crowd favoured Seattle, who came into the game as narrow favourites, and their win also means quarterback Sam Darnold completed his redemption story after being written off as a starting NFL quarterback.

The Seahawks are Darnold's fifth team in his eight-year career - and third in three years - but in his first year in Seattle the former third overall draft pick has won the game's biggest prize.

The 28-year-old has been haunted by a comment he made as he struggled in a game against the Patriots in 2019, when he said "I'm seeing ghosts", but Darnold has now exorcised those demons.

Instead, it was Maye who suffered a nightmare when confronted with the fast, physical defence that Durde and coach Macdonald have fashioned in their two seasons together in Seattle.

Such is the breadth and depth of the threat it carries that Devon Witherspoon claimed a sack from cornerback. He, Derick Hall and Rylie Mills only registered 2.5 sacks between them all season but all three got to Maye in the first half.

The Patriots earned only four first downs before the interval and 52 yards in total. Some cruel folks on social media even joked that Bad Bunny gained more yards as he carried a ball during his half-time show.

Hall's second sack forced a fumble which was recovered by Byron Murphy, who also sacked Maye twice as the Dark Side wrote themselves into Seattle folklore alongside the 'Legion of Boom', the defence that led the Seahawks to their previous Super Bowl win in 2014.

"My team-mates and my coaches, they believed in me," Darnold told NBC.

"Since the first training camp, every single day we came to work. Shout-out to our offensive line for everything they did in the game. But I've also got to shout out our defence."

"We did it. It's been such a special journey with these guys. So much hard work has been put into this and we did it."

**Summary:** The Seattle Seahawks clinched their second Super Bowl title with a commanding 29-13 win over the New England Patriots, largely due to their suffocating defense. Known as 'the Dark Side', the Seahawks' defense, under the guidance of British coach Aden Durde, dismantled the Patriots' offense. They recorded six sacks, forced three turnovers, and even scored a defensive touchdown.

New England's quarterback, Drake Maye, struggled throughout the game, and a key moment came when linebacker Uchenna Nwosu returned an interception for a 45-yard touchdown. Adding to the Seahawks' dominance, kicker Jason Meyers set a Super Bowl record with five field goals. The victory also served as a redemption for quarterback Sam Darnold, who has revitalized his career in Seattle. The performance of the Seahawks' defense has drawn comparisons to the legendary 'Legion of Boom' from their 2014 championship team.

## Olympic Weather Concerns Grow

**Details:** The development has drawn widespread attention across the United States as officials, analysts, and the public assess its broader impact. Experts say the event reflects larger economic, political, or environmental trends shaping the country in early 2026. Leaders across multiple sectors have offered varying perspectives on the situation. Some see it as evidence of resilience and adaptation, while others warn of longer-term challenges if the current trajectory continues. Communities in different regions are experiencing the effects in unique ways, from employment and infrastructure to environmental concerns. Policymakers are discussing potential responses while industry representatives and advocacy groups call for coordinated action. Analysts note that the coming months will be critical in determining whether the trend stabilizes or evolves into a more significant national issue. The story highlights how modern developments are shaped by global markets, technological change, and shifting climate conditions. ## NBA Midseason Trades Reshape Playoff Race

**Details:** On January 8, 2026, ESPN analysts published six hypothetical NBA trade proposals that could reshape the playoff chase as the February deadline approaches, offering strategic insights for contending teams. These speculative deals, analyzed by Zach Kram, Kevin Pelton, and Bobby Marks, aim to address key weaknesses and potentially alter postseason dynamics across the league.

The NBA trade season kicked off with the Atlanta Hawks trading Trae Young to the Washington Wizards, setting the stage for further moves. In response, ESPN outlined six trades designed to bolster playoff contenders, starting with the Milwaukee Bucks acquiring Michael Porter Jr. from the Brooklyn Nets. This deal would send Kyle Kuzma, Taurean Prince, and a 2031 first-round pick to Brooklyn, with the Detroit Pistons facilitating. Porter is envisioned as an ideal co-star for Giannis Antetokounmpo, enhancing the Bucks' performance when their MVP rests, while the Nets could accelerate their rebuild by securing additional draft assets.

Second, the Los Angeles Lakers could address defensive struggles by trading for Keon Ellis from the Sacramento Kings in exchange for Dalton Knecht and a 2032 second-round pick. Ellis' perimeter defense would help a Lakers team ranking 23rd in defensive rating, and acquiring his Bird rights provides future flexibility. The Kings benefit by gaining a young shooter in Knecht, who is under a controllable contract through 2027-28, offering long-term value.

Third, the Golden State Warriors are linked to a multi-team trade involving Trey Murphy III from the New Orleans Pelicans. The Warriors would send Jonathan Kuminga, Moses Moody, and multiple first-round picks to New Orleans, with the Utah Jazz taking Kevon Looney. Murphy's 38% career three-point shooting would complement Stephen Curry's offense, and the move could save Golden State \$25 million in luxury tax. New Orleans acquires young talent and draft capital, while Utah facilitates with a trade exception.

Fourth, the Minnesota Timberwolves aim to solve point guard issues by trading for Tre Jones from the Chicago Bulls, offering Rob Dillingham and Terrence Shannon Jr. Jones' steady ball-handling and low turnover rate could stabilize Minnesota's offense, which has the worst clutch turnover rate in the league, supporting Anthony Edwards' development. Chicago gains younger players with upside, though analysts question if Dillingham is ready for a rotational role.

Fifth, the San Antonio Spurs might add frontcourt depth by acquiring Guerschon Yabusele from the New York Knicks, with Cam Whitmore going to the Knicks and Jeremy Sochan to the Washington Wizards. Yabusele's experience playing with Victor Wembanyama for the French national team makes him a logical fit, and the Spurs receive a second-round pick. The Wizards take a chance on Sochan's potential, while the Knicks improve financial flexibility by moving Yabusele's salary.

Sixth, the Toronto Raptors, facing center injuries, could trade for Brook Lopez from the LA Clippers, giving up Ochai Agbaji, Jamison Battle, and a second-round pick. Lopez' playoff experience and defensive skills, allowing just 55% shooting at the rim this season, would fill a critical gap for Toronto. The Clippers get younger assets and open minutes for rookie center Yanic Konan Niederhauser, aligning with a youth movement.

These proposals highlight the strategic considerations as teams navigate salary caps and roster construction ahead of the deadline. Analysts note that moves like Jones to Minnesota or Ellis to Los Angeles could have significant playoff implications, potentially shifting the balance in both conferences. While not actual transactions, they reflect ongoing speculation and the pressure on franchises to maximize championship windows in the coming weeks.

**Summary:** In a speculative analysis, ESPN experts outlined six hypothetical NBA trades that could reshape the playoff picture as the February deadline approaches. These proposed deals are designed to help contending teams address specific roster weaknesses.

Key proposals include the Milwaukee Bucks acquiring Michael Porter Jr. to support Giannis Antetokounmpo, and the Los Angeles Lakers trading for defensive specialist Keon Ellis to improve their perimeter defense. Another significant trade suggests the Golden State Warriors could land shooter Trey Murphy III, providing a boost to their offense around Stephen Curry. Other potential moves involve the Minnesota Timberwolves targeting point guard Tre Jones to reduce turnovers and the Toronto Raptors acquiring center Brook Lopez to shore up their frontcourt. These speculative trades highlight the strategic maneuvering teams might consider to bolster their rosters for a deep playoff run.

## Tech Sector Hiring Slows in Early 2026

**Details:** Over the past five years, tech hiring has experienced a boom-and-bust cycle, with tech job postings finally reaching a level of stability in mid-2025, says Brendon Bernard, senior economist for job site Indeed.

And as tech workers look for a better hiring environment in 2026, it's essential to understand the catalysts that created the volatile hiring climate in the early part of this decade, and use them as a guide to assess the hiring environment in the New Year, hiring experts say.

As companies reopened to their full capacity and beyond following the height of the pandemic in 2020, U.S. job postings overall shot up more than 50% from pre-pandemic levels, while tech job postings more than doubled, Bernard says. Changes in the economy fueled this hiring activity, driven by remote work, booming tech venture capital activity, and other factors, such as low interest rates, he adds.

"This surge was never sustainable," Bernard says.

Then the Feds started hiking interest rates, making it more expensive for companies to operate, and the hiring surge ended in mid-2022, with tech job listings plummeting through 2023.

A tsunami of layoffs began to wash across corporate America in late 2022, but the fundamental shift for tech jobs came in the form of hiring freezes that have largely remained in place to this day, with tech job listings down 35% compared to the pre-pandemic period of February 2020, according to a recent Indeed report, "Winning Tech Talent in a Shifting Landscape."

Although tech job postings fell substantially from pre-pandemic levels, they have been pretty stable at low levels since the second half of 2025, Bernard said. And he adds there are no signs in Indeed's data to suggest a return of another boom-bust cycle in the tech sector in the near future.

"It's more of just a continued holding pattern," says Bernard.

A stronger macroenvironment situation is the most reliable way to get the tech hiring appetite back, Bernard says. Signs of a stronger macroeconomic environment include falling unemployment rates and rising overall job postings, of which tech would be part of that trend, Bernard adds.

Thomas Vick, senior regional director and tech recruiter for Robert Half, notes that technology advancements can help fuel an increase in tech job postings in 2026.

"More and more executives are telling us they'll need to hire more IT people to work on projects next year, which have been sitting idle for a very long period, waiting for more certainty in the market," Vick said. "Technology is advancing at such a pace that you can't sit idle for too long, no matter what the market is doing, no matter what other catalysts are out there."

Demand for AI skills, in particular, is accelerating rapidly, says Jessica Hardeman, Global Head of Attraction & Engagement at Indeed.

"What we're seeing in the market is that it's essentially split. We have a surplus of applicants for generalist tech roles, but we also have a shortage in the deeply specialized AI space," Hardeman says.

That's because AI is reducing employers' reliance on typical staffing levels for some generalist roles, while enterprise-wide AI transformations are driving hiring for specialized roles, she adds.

Data management, data analytics and data preparation for AI implementation skills will be highly sought after by employers in 2026, because people have quickly realized that AI is only as good as your data, Vick says.

**Summary:** After a volatile boom-and-bust cycle over the past five years, the tech hiring market has stabilized at low levels, with job postings down 35% compared to pre-pandemic figures. The post-pandemic hiring surge, fueled by remote work and low interest rates, ended abruptly in mid-2022 as interest rates rose, leading to widespread hiring freezes.

According to economists, the market is now in a "holding pattern," with a significant recovery unlikely without a stronger overall economy. However, a major shift is occurring within the sector. While there is a surplus of applicants for generalist tech roles, demand is accelerating for specialized skills, particularly in Artificial Intelligence. Experts predict that in 2026, roles involving data management, data analytics, and data preparation for AI implementation will be highly sought after.

## Congress Debates New Budget Framework

**Details:** House Republicans have approved a multitrillion-dollar budget framework that allows the party to begin the process of drafting legislation to enact key elements of President Trump's domestic policy agenda — including tax cuts and spending on defense, energy and immigration.

The budget blueprint was approved Thursday by a vote of 216 to 214.

GOP Reps. Thomas Massie of Kentucky and Victoria Spartz of Indiana joined all Democrats in voting no.

"I don't believe they're going to make any cuts of any consequence," Massie said after the vote. "Now they may reduce spending here and increase spending there, but overall, the money spent next year is going to be more than the money spent this year."

The vote is a victory for Trump and congressional Republican leaders who spent days convincing fiscal hawks within the Republican Party to vote for the bill despite their frustration over the level of spending cuts included in the Senate version of the plan that was adopted on Saturday. The Senate framework outlines only about \$4 billion in spending cuts. The House version seeks at least \$1.5 trillion.

Now that Republicans have adopted identical versions of the framework in the House and Senate, they are able to unlock a special budget tool known as reconciliation — a complicated process that allows them to avoid a filibuster in Senate and pass a final version of the legislation with a 51-vote simple majority.

Both chambers will now get to work on drafting the final legislative product, likely a lengthy process requiring intense negotiations. House Speaker Mike Johnson, R-La., told reporters that after the two-week recess that begins next week, House committees will work "in a collaborative fashion" with Senate committees on next steps.

"We have bills drafted. Most of them have been scored already," he said. "Now we go through the process of marking it up and finding the equilibrium points with everybody so that all those interests are met."

The final vote came after House GOP leaders delayed a scheduled vote Wednesday night because of dissent from conservative hard-liners concerned that approving the Senate amendment would prevent them from achieving the level of spending cuts they want in the final bill.

Senate Majority Leader John Thune, R-S.D., and Speaker Johnson gave a brief press conference ahead of the House vote, emphasizing unity despite months of daylight between the chambers over the scope of spending cuts.

"Our two chambers are directly aligned also on a very important principle, and that is the principle of fiscal responsibility," Johnson said. "We are committed to finding at least \$1.5 trillion in savings for the American people while also preserving our essential programs."

He added: "I'm very happy to have our partners in the Senate working so closely with us as one team, one unified team, which is very important for us to deliver on all these objectives."

Thune said they are aligned on making the 2017 tax cuts permanent and to secure significant spending cuts.

"We have got to do something to get the country on a more sustainable fiscal path," he said. "The speaker's talked about \$1.5 trillion. We have a lot of United States senators who believe that is a minimum. And we're certainly going to do everything we can to be as aggressive as possible to see that we are serious about the matter, not only of making our federal government more fiscally sustainable, but also deficit reduction."

**Summary:** House Republicans narrowly passed a multitrillion-dollar budget framework, enabling them to begin drafting legislation for President Trump's key domestic policies, including tax cuts and increased spending on defense and immigration. The 216-214 vote unlocks a special budgetary process known as reconciliation, which would allow the final bill to pass the Senate with a simple 51-vote majority, bypassing a potential filibuster.

The approval came despite dissent from some conservative Republicans who felt the plan didn't cut spending enough. House leaders are aiming for at least \$1.5 trillion in savings, a stark contrast to the Senate's initial \$4 billion proposal. Speaker Mike Johnson and Senate Majority Leader John Thune emphasized unity, stating their shared goals are to make the 2017 tax cuts permanent and achieve significant deficit reduction.

## Campaign Season Intensifies Ahead of Elections

**Details:** The development has drawn widespread attention across the United States as officials, analysts, and the public assess its broader impact. Experts say the event reflects larger economic, political, or environmental trends shaping the country in early 2026. Leaders across multiple sectors have offered varying perspectives on the situation. Some see it as evidence of resilience and adaptation, while others warn of longer-term challenges if the current trajectory continues. Communities in different regions are experiencing the effects in unique ways, from employment and infrastructure to environmental concerns. Policymakers are discussing potential responses while industry representatives and advocacy groups call for coordinated action. Analysts note that the coming months will be critical in determining whether the trend stabilizes or evolves into a more significant national issue. The story highlights how modern developments are shaped by global markets, technological change, and shifting climate conditions. ## **Historic Cold Wave Hits Northern States**

**Details:** A dangerous winter storm has swept across the US, leaving at least seven people dead and cutting power to hundreds of thousands of homes.

Schools and roads across the country have been closed and flights have been cancelled as "life threatening" conditions stretched from Texas to New England, according to the National Weather Service (NWS).

At least two people died of hypothermia in Louisiana, and other deaths linked to the storm have been reported in Texas, Tennessee and Kansas.

As of Sunday afternoon, more than 800,000 households had lost power, according to poweroutage.us. Meanwhile, more than 11,000 flights were cancelled, FlightAware reported.

Widespread heavy snow, sleet and freezing rain, which is a dangerous phenomenon where cooled rain droplets freeze instantly on surfaces, could last for days, and the storm could affect around 180 million Americans - more than half the population.

"The snow and the ice will be very, very slow to melt and won't be going away anytime soon, and that's going to hinder any recovery efforts," Allison Santorelli, a meteorologist with the National Weather Service, told the BBC's US media partner CBS News.

Louisiana's Department of Health confirmed on Sunday that two men had died of hypothermia.

The mayor of Austin, Texas, said there had been an "exposure-related" death.

Officials in Kansas said a woman, whose body was found on Sunday afternoon covered in snow, "may have succumbed to hypothermia".

Weather-related deaths of three people have also been reported in Tennessee.

New York City Mayor Zohran Mamdani wrote in a post on X that at least five people in the city had died on Saturday but added their cause of death was yet to be determined.

He said, however, "It is a reminder that every year New Yorkers succumb to the cold".

New York state Governor Kathy Hochul warned residents to stay inside and off roads.

"This is certainly the coldest weather we've seen, the coldest winter storm we've seen in years," she said on Sunday.

"A sort of an arctic siege has taken over our state and many other states across the nation."

Hochul said the "brutal" conditions were expected to bring the longest cold stretch and highest snow falls in years.

"It is bone chilling and it is dangerous," she said.

Kentucky Governor Andy Beshear said on Sunday that the state was seeing more ice and less snow than was originally predicted.

"That is not good news for Kentucky," he said.

Weather experts have warned that one of the biggest dangers of the storm is ice, which has the potential to damage trees, down power lines and make roads unsafe.

In Virginia and Kentucky, authorities have responded to hundreds of crashes on roads.

Canadians have also been hit with heavy snow and hundreds of cancelled flights.

Officials estimate that there will be 15-30cm (5-11in) of snowfall in the province of Ontario.

**Summary:** A severe winter storm has swept across the United States, resulting in at least seven deaths and widespread disruption. The "life-threatening" conditions, including heavy snow, sleet, and freezing rain, are affecting over 180 million people from Texas to New England. The storm has caused power outages for more than 800,000 households and led to the cancellation of over 11,000 flights.

Fatalities linked to the weather, including cases of hypothermia, have been reported in Louisiana, Texas, Tennessee, and Kansas. Officials have issued urgent warnings about the "bone-chilling" and "dangerous" cold, advising residents to stay indoors. Ice accumulation is a major concern, making roads hazardous and damaging power lines. The storm is also impacting Canada with heavy snowfall and flight cancellations.
